NAVadirected RNA polymerase (EC 2.7.7.6) 22K chain - vaccinia virus (strains WR and C C) Species vaccinia virus

Nilternate names: J4R protein
C) Species: vaccinia virus
A) Note: host Homo sapiens (man)
C: Date: 28 - Dec - 1987 # sequence_revision 28 - Dec - 1987 # text_change 11-Jun-1999
C; Accession: A25734; I23092; G42513
R; Broyles, S.S.; Moss, B.
Proc. Natl. Acad. Sci. U. SA. B3, 3141-3145, 1986
A; Title: Homology between RNA polymerases of poxviruses, prokaryotes; and eukaryotes: A; Reference number: A25734; MUID: 86205852

-!- FUNCTION: DNA-DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPTION OF DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS
                                                                                                                                                                                                                                                                                                                              -!- CATALYTIC ACTIVITY: N NUCLEOSIDE TRIPHOSPHATE - N PYROPHOSPHATE +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ANDERSSON S.G.E., ZOMORODIPOUR A., ANDERSSON J.O., SICHERITZ-PONTEN T., ALSMARK U.C.M., PODOWSKI R.M., NAESLUND A.K., ERIKSSON A.-P.WINKLER H.H., KURLAND C.G.; "The genome sequence of Rickettsia prowazekii and the origin of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                  -1- SUBUNIT: THIS ENZYME CONSISTS OF AT LEAST EIGHT SUBUNITS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nature 396:133-140(1998).

-!- FUNCTION: THIS SMALL UBIQUITOUS ENZYME IS ESSENTIAL FOR MAINTENANCE AND CELL GROWTH.

-!- CATALYTIC ACTIVITY: ATP + AMP - ADP + ADP.

-!- SUBGNIT: MONOMER (BY SIMILARITY).

-!- SUBCELLIAR LOCATION: CYTOPLASMIC.

-!- SIMILARITY: BELONGS TO THE ADENYLATE KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          subdivision; Rickettsiales;

That ternative splicating energies multiple isoforms of a rabbit prostaglandin E2 receptor.";

J. Biol. Chem. 269:6163-6169(1994).

THIS RECEPTOR ROR PROSTAGLANDIN E2 (PGE2). THE ACTIVITY OF THIS RECEPTOR CAN COUPLE TO BOTH THE INHIBITION OF ADENYLATE CYCLASE MEDIATED BY G-I PROTEINS, AND TO AN ELEVATION OF INTRACELLULAR CALCIUM. THE VARIOUS FORMS CAN INTERACT WITH DIFFERENT SECOND MESSENGER SYSTEMS (BY SIMILARITY).

CHORDING RECEPTOR THE SECOND MESSENGER SYSTEMS (BY SIMILARITY).

TERMINUS ARE PRODUCTS: AT LEAST FOUR FORMS THAT DIFFERS AT THE C-ITERNATIVE PRODUCTS: A LIGAND BINDING PROPERTIES BUT DIFFERENT.

CHENTING ARE PRODUCTS: AT LEAST FOUR FORMS THAT DIFFERENT.

CROUPLING PROPERTIES WITH G PROTEINS. THE SEQUENCE OF CLONE 77A IS

   http://webace.sanger.ac.uk/cgi-
bin/display?db-wormaccéclass=Sequence &object=F14B6
Current sequence finiahing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a small
impoRTANT: This sequence is not the entire insert of clone F14B6.
It may be shorter because we only sequence
overlapping sections.
It may be shorter because we only sequence overlapping sections
once, or longer because we only sequence overlapping sections
neighbouring submissions.
The true left end of clone F41D3 is at 2917 in this sequence. The
true right end of clone F41D3 is at 19221 in this sequence. The
start of this sequence (1. .109) overlaps with the end of sequence
   Caenorhabditis elegans.

Direct Submitted (26-NOV-1999) Sanger Centre, Hinxton, Cambridgeshire, Calbilled (26-NOV-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Nov 27, 1999 this sequence version replaced gi:6066017.
IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Ordig_LD: 00008 Length: 1036bp

Nakajima,D., Nomura,N. and Ohara,O.
Characterization of cDNA clones in size-fractionated cDNA libraries
from human brain
DNA Res. 4 (5), 345-349 (1997)
   Submitted (08-0CT-1997) to the DDBJ/EMBL/GenBank databases. Osamu Ohara, Kazusa DNA Research Institute, Laboratory of DNA Technology; Yana 1532-3, Kisarazu, Chiba 292-0812, Japan (E-mail.codnainfo@kazusa.or.jp, Tel:+81-438-52-3913, Fax:+81-438-52-3914)
                Direct Submission
Submitted (16-007-1999) Celera Genomics, 45 West Gude Drive,
Submitted (16-007-1999) Celera Genomics, 45 West Gude Drive,
Rockville, MD, USA
This sequence was identified as CDM:10210882 by the submitter.
This sequence will sequence e-mail to fly@celera.com.
* NOTE: This is a "working draft" sequence.
* This sequence will be replaced
* by the flished sequence as soon as it is available and
* the accession number will be preserved.

Submitted (10-SEP-1999) Wellcome Trust Genome Campus, Hinxton,
Cambridgeshire, CB10 15A, UK. E-mail enquires:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
on Sep 12, 1999 this sequence version replaced gi:5777438.
IMPORTANT This sequence version replaced gi:5777438.
IMPORTANT This sequence is unfinished and does not necessarily
represent the correct sequence. Work on the sequence is in progress
and the release of this data is based on the understanding that the
sequence may change as work continues. The sequence may be
contaminated with foreign sequence from E.coli, yeast, vector,
phage etc. Order of segments is not known; 800 n's separate
segments. Unfinished: dJ1141E20 Contig_ID: 00340 acc-AL109912
Length: 64235 bp Unfinished: dJ1141E20 Contig_ID: 00679
acc-AL109912 Length: 18869 bp Unfinished: dJ1141E20 Contig_ID:
00679. acc-AL109912 Length: 13202 bp.
* NOTE: This is a 'working draft' sequence
* as soon as it is available and the accession number will
* be preserved:
   Submitted (09-SEP-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk requests: clonerequest@sanger.ac.uk clones controled this sequence version replaced gi:5791529.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with the following abbreviations are used to associate primary accession
   DNA PRI 23-NOV-1999 clone 1112D6 on chromosome 6q21-22.2,
   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;

  COMMENT
numbers given in the feature table with their source databases:
Em:, FMBEL; Swi. SWISSPROT; Tr:, TREMBL; Wp:, WORNPEP; Information
on the WORNPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence is
the entire insert of clone 1112D6. This sequence has been finished
according to sequence map criteria as follows. An attempt is made
to resolve all sequencing problems, such as compressions and
repeats, but not necessarily within known annotated human repeat
sequence elements (e.g. Alu). Where the sequence is ambiguous,
there is an annotation using the 'unsure' feature key.
This sequence was generated from part of bacterial clone contigs of
human chromosome 6, constructed by the Sanger Centre Chromosome 6
Mapping Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr6
1112D6 is from the library RPCI-5 constructed at the Roswell Park
Cancer Institute by the group of Pieter de Jong. For further
contains see thit processed.

       DD TO THE PERMINANT OF 
   Claim 1; Page 372; 2245pp; Japanese.

A single-stranded DNA (or its complementary strand or the corresp.

double-stranded DNA) which comprises one of the 7837 "GS" sequences
given in T19001-T26837 and which is able to hybridise to part of
human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature)
sequences were obtained from 3'-directed CDNA libraries prepared
from various human tissues; synthesis of CDNA was initiated from the
untranslated sequence is unique to a particular mRNA species, almost
all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library
is constructed so as to reflect accurately the relative abundance of
different mRNAs in the particular tissue from which it was derived.
The appearance frequency of a given GS in a cDNA library can be
determined (esp. using primers and probes derived from the GS
sequences) as a means of diagnosing abnormal cell function or for
recognising different cell types.
Sequence 119 BP; 37 A; 34 C; 24 T;
   Identifying gene signatures in 3'-directed human cDNA library - e.g. for diagnosis of abnormal cell function, by preparing cDNA that reflects relative abundance of corresp. mRNA in specific human

Transform plants to alter the properties or composition of cell transform plants to alter the properties or composition of cell walls, e.g. for modifying foodstuffs or wood pulp products

Claim 8; Fig 1A-0; 66pp; English.

Claim 8; Fig 1A-0; 66pp; English.

Claim 8; Fig 1A-0; 66pp; English.

This is the nuclectide sequence of clone gil6, which encodes a novel glycosyltransferase (see W90188) of Arabidopsis thallana.

A thaliana expressed sequence tag (EST) clones were identified when searching an EST database with the Schizosaccharomyces pombe gmal2p and the related Saccharomyces cerevisiae mnnl0p proteins.

An iterative process was then performed to isolate further clones, and 5 different genes were identified, i.e. gil1 (gma twelve-like 1), gil2, gil4, gil5 and gil6 (see V14278-83). The longest clone, gil6, identified from EST H36383, encoded a predicted truncated contain, and 5 'ARAE was performed using RNA from A. thaliana callus cells to obtain the full-length clone. The predicted protein has the characteristics of a Golgi glycosyltransferase, i.e. a short colone. Niterminus, and sharmane domain, and a larger lumenal C-terminal domain with conserved cysteines. The plant clumenal C-terminal domain with conserved cysteines. The plant clumenal conserved systeines of complex non-cellulosic colone who may also catalyse the colone when may also catalyse the colone when the colone when may also catalyse the colone when the colone when may also catalyse the colone when the colone when may also catalyse the colone when the colone when may also catalyse the colone when the colone when may also catalyse the colone when the colone when may also catalyse the colone when the colone when may also catalyse the colone or man may also catalyse the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone when the colone or colone when the colone when th
   plant cell wall polysaccharides. They may also catalyse the glycosylation of plant cell wall protein and/or the transfer of saccharide moteties from nucleotide sugar precursors to oligosaccharide precursors. Nucleic acids encoding the glycosyltransferases can be used to transform plants to alter the properties or composition of the cell wall. The plants produced can be used in the preparation of e.g. food or wood pulp products
antibodies e.g. on columns, in diagnostic tests and in assays. may also be used in the production of pharmaceuticals. Sequence 3279 BP; 1505 A; 480~\rm C; 626~\rm G; 668~\rm T;

NUCLEIC acid molecules comprising part or all of the BRCA2 cancer susceptibility gene - useful for diagnosis, prognosis or therapeutic treatment of cancer represents exon 11 and the intron boundaries of the SC Claim 10; FT8 7; 124pp; English.

The present sequence represents exon 11 and the intron boundaries of the BRCA2 cancer susceptibility gene. The nucleic acid molecule can be used to construct probes for screening cDNA or genomic libraries, sequencing positive clones obtained, and assembling the full length BRCA2 concerts of method of medical treatment, preferably gene therapy, especially for treating cancer, where the cancer is female or male breast cancer, ovarian, prostate or colorectal cancer, ocular melanoma or lawkamia. In particular antisense oligonuclecities coular melanoma or lawkamia. In particular antisense oligonuclecities capable of prevented. The BRCA2 nucleic acid, pre-mRNA or mature mRNA are used so that the expression of the BRCA2 nucleic acid is reduced or prevented. The nucleic acid molecules are also useful in a method for diagnosing susceptibility or predisposition to cancer in a patient. The nucleic acid molecules are used to design probes or primers for PCR to determine or detect the presence of mutations in a sample of nucleic control of the promoter. Antibodies are used to determine the presence, amount or location in a cell of a BRCA2 polypeptide or its mutant forms. The properties are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used and partners are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, the partners for problement the partners for

Claim 1; Page 814-819; 1409pp; English.

The present invention describes a computer readable medium which has the present invention describes a computer readable medium which has the nucleotide sequences SEO ID NO: 1 to 391 (V52134 to V52524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEO ID NO: 1 to 391 (V52134 to V52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEO ID NO: 1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEO ID NO: 1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating mRNA, DNA or CDNA produced
   from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
  Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays, and pharmaceutical compositions and vaccines for Streptococcus
   Streptococcus pneumoniae genome fragment SEQ ID No:112.

   Sequence
NAME OF THE PROPERTY OF THE PR
   The present sequence represents the partial sequence of the BRCA2 cancer susceptibility gene. The nucleic acid molecule can be used to construct probes for screening cDNA or genomic libraries, sequencing construct probes for screening cDNA or genomic libraries, sequencing construct probes for screening cDNA or genomic libraries, sequencing construct probes for and assembling the full length BRCA2 constructed in a method of medical treatment, preferably gene therapy, especially for treating cancer, where the cancer is female or male breast cancer, ovarian, prostate or colorectal cancer, ocular melanoma or latexaemia. In particular antisense oligonucleotides capable of by bridising to the BRCA2 nucleic acid, pre-mRNA or mature mRNA are used so that the expression of the BRCA2 nucleic acid is reduced or prevented. The nucleic acid molecules are also useful in a method for prevented. The nucleic acid molecules are used to design probes or primers for PCR to determine or detect the presence of mutations in a sample of nucleic caid molecules are used to design probes or primers for PCR to determine or detect the BRCA2 promoter region is useful for screening for substances which modilate the expression of nucleic acid under control of the promoter. Antibodies are used to determine the presence of mutations or determine or a cell of a BRCA2 polypeptide or its mutant forms. The polypeptides are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding partners, these are used to screen for binding

PP Avelop products for determining susceptibility to, detection and develop products for determining susceptibility to, detection and treatment of breast or ovarian cancer.

PP Claim 13: Page 97-111: 226pp; English.

CC Tase present invention describes genomic DNA which contains a BRCA2 gene where the first 12 nucleotides beginning exon 5 are 5-TCCTGTTGTTGT-3' as in sequence (I) (see X03249), where nucleotides numbers (I) (see X03249), where nucleotides beginning exon 5 are 5-TCCTGTTGTTGTT-3' as in sequence (II) (see X30251) and the first 20 nucleotides beginning con a sequence (II) (see X30551) and the first 20 nucleotides beginning exon 15 are 5-CTGGTGTTGTTGTTGTTG-3' as in sequence (III) (see X30551).

CC last 20 nucleotides encoding exon 15 are 5-CTGGTGTTGTTGATAAACAG-3' as in sequence (III) (see X30551) and the first 20 nucleotides beginning exon 16 are 5'-CTGTATAGCTATGGTTGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGCTATGGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGCTATGGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGCTATGGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGCTATGGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGCTATGTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGTTG-3' as in sequence (III) (see X30253).

CF con 16 are 5'-CTGTATAGTTG-3' as in sequence or quantifying the amount of a tumour growth inhibitor following such therapy. The BRCA2 protein, polypeptides, their contains and canceristics of BRCA2 proteins, such as structure and cunction of BRCA2 in oncogenesis or subcellular localisation of BRCA2 contains cells. The present sequence encodes

HindIII; Rice ne of two most popular grains in the
world. Half of the world population especially those
inhabiting highly populated areas of the humid tropics
and subtropics, rely on rice as their primary source of
carbohydrate. Monocotyledonous rice is a diploid plant
(2n=24) with a haploid genome equivalent of 431 Mbp
/Arumquanthan and Earle, 1991). The relatively small
genome of rice, three times larger than that of
Arabidopsis, makes it suitable for genomic studies. In
order to facilitate positional cloning, physical mapping
and genome sequencing of rice, we have constructed a BAC
library from Oryza sativa, Nipponbare variety. The
library from Oryza sativa, Nipponbare variety. The
library from Oryza sativa, Nipponbare variety. The
library from Oryza sativa, Nipponbare variety. The
library from Oryza sativa, Nipponbare variety. The
library from Oryza sativa, Nipponbare variety. The
sequence with a probability of 99.9 % Two high density
filters, each containing 18,432 clones (doubly spotted),
represent the whole-library for colony screening."

/note="Vector: pT7T3Pac (pT7T3, Pharmacia); Site_1: ECORI; Site_2: HindIII; This cDNA library was constructed from mRNA isolated from leaves of 2-3 week old greenhouse grown plants. Complementary DNA was synthesized from mRNA using a 3' anchored poly (dT) primer. ECORI adapters were ligated to the blunt-ended cDNA fragments followed by digestion with ECORI and HindIII. The CDNA fragments were directionally cloned into the ECORI-HindIII restriction were transformed into DH10B host cells (Gibco BRL). This library was constructed by Dr. Randy Shoemaker and Dr.

Fracting autoimmune diseases

Example 1: Page 19: 41pp: English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating cerivity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or crivity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or c-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula: A-B, where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and a represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise at any peptide type bond within the brackets. The compounds comprise at any peptide type bond within the brackets. The compounds comprise on mino acid sequences related to a Class I HLA-B alphal domain (positions of 9-84). They can be used to inhibit cytocoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with amitgenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of treating autoimmune diseases, e.g. diabetes, received for decetion and diagnosis. The products can also be used for decetion and diagnosis.
  New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.
Claim 17; Page 35; 41pp; English.
This sequence represents a specifically claimed immunomodulating dimer peptide of the invention. A peptide-type compound or variant is

   Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R82907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CTLS)

   While of the page 12, 29pp; English.

Fromposes. Comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Formula: Page 12, 29pp; English.

Reample: Page 12, 29pp; English.

R95413, and R95415-R95431 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the human-leucocyte-associated antigens. This sequence represents the protein associated with T-cell lysate. P74 is a T-cell surface membrane of protein associated with T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein H8c70.

Co p74 is found in a limited number of cell types, but is particularly carpressed on B and T cells. P74 can be isolated by lysis of a suitable coll with an amphoteric detergent, and then passed through an affinity expressed on B and T cells. P74 can be isolated by lysis of a suitable coll with an amphoteric detergent, and then passed through an affinity colluming containing the extracellular fragment of p74 combined with the HLA-B2702.60-84 (see R95416), induces calclum influx, and inhibits compounds can be screened for their effect on the cytolytic activity of compounds can be screened for their effect on the cytolytic activity of determining them with the extracellular portion of p74 and determining T-cells and antigen presenting cells (APCs), by adding to the mix the extracellular portion of p74, in an amount sufficient to compete converse.

   Immunity responses
Claim 2: Page 108-111; 171pp; English.
The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLAZ-10). The present sequence is human DTLR3 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) can be used to produce the DTLR proteins. The DTLR proteins can be used to alter phosphate metabolism, to modulate inflammatory function, innate

  haloperoxidase from Curvularia verruculosa - useful for oxidn. of halide, halogenation and, in presence of hydrogen peroxide and thiocyanate, as antimicrobial.

Claim 17: Page 38: 58pp: English.

A haloperoxidase partial peptide (W12037) corresponds to amino acids 275-314 of the Curvularia verruculosa CBS.63 anzyme. Partial peptides (W12034-41) were obtd. from the haloperoxidase by digestion with lysyl-specific protease from Achromobacter. Primers (see also 751613-14) based on the peptides were used in the PCR amplification of genomic DNA from CBS 147.63. The PCR product was used to screen a genomic library, leading to the isolation of the haloperoxidase gene (751612).
       immunity responses or morphological effects. The DTLR proteins can used in the treatment of conditions exhibiting abnormal expression the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.

Talide, halogenation and, in presence of hydrogen peroxide and
Thiocyanate, as antimicrobial
Scilin 23; Page 346-37; Sapp; English.
The haloperoxidase of Curvularia verruculosa CBS.63 shows optimum
activity at about 60 deg C and pH 5.5, retains at least 75%
activity after incubation for 1 hr at pH 7.0 and 60 deg C in the
presence of 0.1% H202, and prefers bromide over chloride ions as
substrate. It can be obtd. from a C. verruculosa fermentation
or by expression in host cells transformed with a vector carrying
the haloperoxidase gene (see also T51612). The isolated enzyme can
be used to oxidise halide to hypohalous acid in the presence of an
CH202 source, or to halogenate cpds. It can also, in the presence
of H202 and thlocyanate, be used as an antimicrobial.

receptor (NACAR) subunit. The cells expressing the alpha and/or beta NACAR subunits may be used in a method of screening compounds to indentify any which modulate the activity of human neuronal NACAR. Subunit specific antibodies may be used to monitor the distribution and expression density of various subunits in normal vs diseased brain tissues. Testing of single receptor subunits or specific receptor subunit combinations with a variety of potential agonists or antagonists provides information with respect to the identification and design of compounds that are capable of very specific interaction with of the more receptor subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting drugs should exhibit fewer unwanted side effects than drugs identified e.g. screening with cells
  Human neuronal nicotinic acetylcholine receptor subunits and DNA - also transformed cells useful for screening cpds. which modulate activity of the receptor Example 2; Page 72-73; 99pp; English.

Submitted (16-SEP-1999) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Sep 22, 1999 this sequence version replaced gi:5916428.

* NOTE: This is a "working draft' sequence. It currently
* Consists of 89 configs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N. but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Barrell, B.G.

Deciphering the biology of Mycobacterium tuberculosis from the
  (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.
  CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
  Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

Submitted (28-Aug-1999) Seattle Biomedical Research Institution, 4
Nickerson Street, Seattle, MA 98109-1651, USA
Noct 1, 1999 this sequence version replaced gi:5801666.
NOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pleces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
* as soon as it is available and the accession number will
   - Web : www.genoscope.cns.fr)
IMPORTANT: This sequence is unfinished and does not necessarly
represent the correct sequence. Work on the sequence is in progress
and the release of this data is based on the understanding that the
sequence may change as work continue. The sequence may be

   bin/displaydb-wormaceclass-Sequence tobject=F14B6
Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone F14B6. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left and of clone F41B3 is at 29177 in this sequence. The
  The end of this sequence (29177. .29283) overlaps with the start of

Timeless gene. New protein
Enterococcus faecalis genom
   Claim 1: Page 1853-1855; 2084pp; English.

Claim 1: Page 1853-1855; 2084pp; English.

A computer readable medium has been developed which has recorded on it.

A computer readable medium has been developed which has recorded on it.

X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importence. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the collypeptides encoded by the Enterococcus faecalis nucleotide sequences can be used in vaccines to prevent or attenuate an Enterococcal

Pellivering active peptide(s) and antigens in non-pathogenic bacteria per particularly for inducting or regulating protective immune response Disclosure; Page 16; 49pp; English.

P Delivering active peptide(PP) and/or antigen (Ag), where each of a promoter is under the control of a promoter for expression in a non-invasive or non-pathogenic bacterium (e.g. the present lactococcus lactis Pl promoter), can be used to transform such a bacterium. The bacterium, which expresses the PP and/or Ag.

Depending on the nature of the PP and/or Ag, the delivery method used to regulate growth, survival, differentiation, effector function and susceptibility to infection of cells and tissues, boost the immune response to colonise amcosal, or other tissues, modulate the immune response of inflammatory or tumour cells, induce apoptosis in tumour ersponse against a pathogen, regulate infiltration of normal tissues by inflammatory or tumour cells, induce apoptosis in tumour cells or down regulate the immune response in treatment of allergy, autoimmune and other immunity related diseases. The method is survival in human or especially veterinary medicine, with the bacterium formulated as a vaccine. The bacterium can express an Ag, particularly one of low immunogenicity, together with an adjuvant, becamend of a particularly one of the immined of the site of application there should be no systemic and local responses can be improved, and since should be no systemic side effects.

Sould be no systemic side effects.

Disclosure; Page 70-72; 110pp; English.
Saccharomyces cerevisiae DKD5D, which is sensitive to aureobasidin, was mutagenized with EMS and genomic libraries of 2 resistant strains were prepared. Resistant gene scaurlk (Q75954) was isolated from 1 library, and resistant gene scaur2k (Q75956) from the other. A DNA fragment of scaurl was used as a probe to isolate a sensitive gene, scaurls (Q75955), from the sensitive strain. A T852A mutation leading to a F158Y conversion gave rise to the sesistance of scaurlk.

  Fundal chromosome integration vector contg. aureobasidin resistance gene - which acts as selection marker, useful in genetic engineering of fund selection marker, useful in genetic engineering of fund selection marker, useful in genetic engineering of fund selections. The wild-type aureobasidin sensitivity gene scaurISR (T09350) was obtained, from a genomic library of Saccharomyces cerevisiae using a mutant aureobasidin resistance gene (T09355) as probe. The gene encodes a protein (R88127) sensitive to aureobasidin. Mutagenesis of the gene at codon 240 resulting in a substitution, deletion or insertion at Ala-240 is used to impart aureobasidin resistance, and the mutated DNA may be used as a selectable

Saccharomyces cerevisiae DKD5D, which is sensitive to aureobasidin, was mutagenized with EMS and genomic libraries of 2 resistant strains were prepared. Resistant gene scaurIR (Q75954) was isolated from 1 library, and resistant gene scaurIR (Q75956) from the other. A DNA fragment of scaurI was used as a probe to isolate a sensitive gene, scaurIS (Q75955), from the sensitive strain. A T852A mutation leading to a F158Y conversion gave rise to the resistance of scaurIR.

Fundal chromosome integration vector contg. aureobasidin resistance gene - which acts as selection marker, useful in genetic engineering of fung of fung.

Disclosure: Page 23-24; 66pp; English.

The aureobasidin resistance gene scaurlR (T09355) was obtd. from a genomic library of Saccharomyces cerevisiae following EMS mutagenesis. Comparison with the wild-type aureobasidin sensitive gene (T00350) showed a T to A mutation at position 852, resulting in a F158Y mutation in the encoded protein (R88132). The gene may be used as a selectable marker component of chromosome integration vectors used for fungus transformation.

CC The haloperoxidase gene (T51612) of Curvularia verruculosa CBS.63 CC codes for an enzyme (W12042) that shows optimum activity at about CC deg C and pH 5.5, which retains at least 75% activity after CC incubation for 1 h. at pH 7.0 and 60 deg C in the presence of 0.1% CC H202, and which prefers bromide over chloride as substrate. It was CC solated from a genomic library using a PCR amplifted partial clone (see also T51613-14) as probe. The 2822 bp fragment in a positive CC plaque has been deposited (in pHAP4-1, in E. coli DH10B) as NRRL CC P1519. The gene can be used to express the haloperoxidase in cc transformed host cells for use in halide oxidation, cpd. CC halogenation and (with H202 and thiocyanate) as an antimicrobial. SQ Sequence 2822 BP; 651 A; 808 C; 674 G; 689 T;

/note="Vector: pBlueScript II (SK-); Site_1: EcoRV; C.
parvum (IOWA isolate) genomic DNA was hydrodynamically sheared to produce fragments having a tight size distribution between 2-4 kb by Dr. Yvonne Thorstenson of the Stanford DNA Sequencing and Technology Center
   (http://sequence.www.stanford.edu/shear.htm). The randomly sheared gDNN was chromotographed on Sephacryl S-400 to remove any small fragments and DNN eluting in the void volume was subcloned into an EcoR V-digested, alkaline phosphatase-treated pBlueScript II (SR-) vector and transformed into E. coli strain XL2 Blue MRF'. Recombinant clones from the first plating of the library were selected for sequence analysis using T3 and T7
   Cryptosporidium parvum.

Cryptosporidium parvum.

Eukaryota: Alveolata: Apicomplexa: Coccidia: Eimeriida:

Eukaryotasporidiidae: Cryptosporidium.

Cryptosporidiudae: Cryptosporidium.

   Example 1: Page 19: 41pp: English.

Peptides W33784-98 and W337789-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-77L) (aa79-84) or (aa88-79) (laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HAA-B alphal domain (positions)
   19-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis. The products can also be used for detection and diagnosis.

Assay for alpha-2b adrenergic receptor ligands - using membranes of cells expressing recombinant receptor
Disclosure: Fig 2A-E; 16pp; Bng1ish.
Human alpha-2B adrenergic receptor (Wil804) is a member of the rhodopsin-like signal transducer family. Its amino acid sequence was deduced from a genomic DNA clone (T59499) obtd. from a human spleen DNA library. Vectors have been adapted to allow prodn. of alpha-2B adrenoceptor in bacterial, yeast or mammalian cells; transfected Lik-cells, designated L-NGC-alpha-2B, are deposited as ArCC CRL 10275. Membranes of transfected mammalian cells an novel methods to identify drugs which specifically interact with, and bind to, the alpha-2B adrenergic receptor.
   Disclosure, Fig 2; 15pp; English.
Clone NGC-alpha2beta was isolated from a human spleen genomic
Library by screening with a fragment of the human 5-Hirb receptor
gene. The gene was used to express recombinant receptor protein
which can be used to produce antibodies for inhibition of receptor
   Isolated DNA encoding human adrenergic receptor - for detecting nucleic acids encoding alpha, 2-beta adrenergic receptor, for screening drugs.

Tomposns. comprising lymphoid surface membrane proteins - which may inhibit cytolytic activity and differentiation of CTLS.

Example: Page 12: 29pp: English.

R95413, and R95415-R9543 represent palindromes and fragments of human-leucocyte-associated antigens. This sequences can be used too the protein associated with T-cell lyaste. P74 is a T-cell surface membrane protein p74 from a T-cell activation in mammalian T-cells, and is also immunologically cross reactive with the heat shock protein CT as as a laso immunologically cross reactive with the heat shock protein theory. P74 is found in a limited number of cell types, but is particularly expressed on B and T cells. P74 can be isolated by lysis of a suitable cell with an amphototaric detergent, and then passed through an affinity column containing a covalently bound HA-B2702 palindromic affinity column containing a covalently bound HA-B2702 palindromic combined with HA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or cytolysis.

Candidate compounds can be screened for their effect on the cytolytic activity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound can determining the amount of binding between the candidate compound companing T-cells and antigen presenting cells (APCS), by adding to the mix the extracellular portion of p74, in an amount cut in the binding of the p74 ligand.

Example 2; Page 72-73; 99pp; English.

Example 2; Page 72-73; 99pp; English.

The present sequence repersents a human neuronal nicotinic acetylcholine receptor (NAChR) subunit. The cells expressing the alpha and/or beta NAChR subunits may be used in a method of screening compounds to identify any which modulate the activity of human neuronal NAChR. Subunit specific antibodiate the activity of human neuronal NAChR. Subunit specific antibodies may be used to monitor the distribution and expression density of various subunits in normal vs diseased brain tissues. Testing of single receptor subunits or specific receptor subunit combinations with a variety of potential agonists or antagonists provides information with respect to the function and activity of the individual subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or
  more receptor subtypes. The resulting drugs should exhibit fewer unwanted side effects than drugs identified e.g. screening with cells that express a variety of subtypes.

Pricobacter pylori nucleic acid sequences and encoded pricobacter pylori nucleic acid sequences and encoded polypeptide(s) - useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection acid the sequence of a H. pylori cell envelope flagellar protein. This is the sequence of a H. pylori cell envelope flagellar protein. The protein may be used in a vaccine to prevent or treat H. pylori life cycle activators or inhibitors. The constant probes derived from it may be used for the identification of the pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H. pylori mRNA. Antibodies and saminst the protein can be used in immunoassays to evaluate the abundance against the protein can be used in immunoassays to evaluate the abundance condition of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for significant homology to other known or exported coding regions continued by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. Pylori by PCR by amplification for recombinant polypeptide production, e.g. in E. coli

"TWO-dimensional gel electrophoresis separation and N-terminal
"TWO-dimensional gel electrophoresis separation and N-terminal
sequence analysis of proteins from Clostridium pasteurianum W5.";
Electrophoresis 19:802-806 (1998).
-!- CATALYTIC ACTIVITY: D-GLYCERALDEHYDE 3-PHOSPHATE + ORTHOPHOSPHATE
+ NAD(+) = 1,3-DIPHOSPHATEGLYCERALE + NADH.
-!- PATHWAY: FIRST STEP IN THE SECOND PHASE OF GLYCOLYSIS.
-!- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
-!- SUBLILARITY: BELONGS TO THE GLYCERALDEHYDE 3-PHOSPHATE
--- DEHYDROGENASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
